

Boulevard Brewing Company Expansion

Wellner Architects, Inc. provided design services for an initial 3,950 square foot expansion of the Boulevard Brewing Company that included an office, toilets, storage, a clean-in-place system, a material handling lift, brite beer tanks, and fermenting tanks to allow for an increased brewing capacity of 55,000 barrels a year. Provisions were made in the roof to allow additional tanks to be lowered into the building. The tanks became an integral part of both the interior and exterior design. Large windows on the front of the building were designed to showcase the brewing process. The building stepped down in the back to expose the tanks to the exterior.
