

KCI Vehicle Wash and Fueling Facility

This comprehensive project was designed to provide a fully automatic wash facility for fleet vehicles including passenger cars and busses, and an oversize wash bay for heavy equipment. Two new, covered, fuel dispensing stations were added for motor fuel and compressed natural gas, including the underground storage tanks and the compressing equipment. Additionally, existing fuel storage tanks at three airport-owned facilities were upgraded to meet federal, state, and local underground storage tank regulations.

Construction Cost	\$3,312,200
Date Complete	2000
Key Personnel	Julie Wellner
