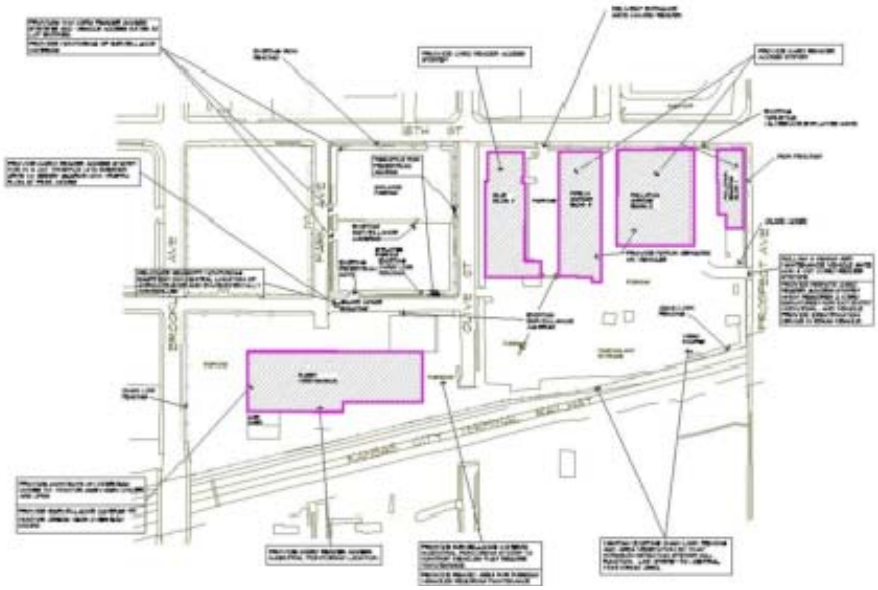
# Security Improvement Study



Wellner Architects and Burns & McDonnell teamed together to assess and evaluate 58 existing facilities with respect to property, physical, and personnel security for the Water Services Department of Kansas City, Missouri. A list of threats were determined based upon the facility observations, an incident report summary provided by the WSD, and discussions with security staff. The primary threats considered in the overall risk assessment process included workplace violence, internet/intranet security, business interruption/disaster recovery, property crime, and general employee theft.

Wellner prepared spreadsheets that included the facility audit information and outlined recommended physical security improvements for each facility. Additionally, plans for each facility were provided to help implement and prioritize the recommended security improvements, as shown above.
