802 Broadway, 4th Floor

Wellner Architects, Inc. was an integral member of the design team for the major renovation and updating of the three terminals at Kansas City International Airport.

As a member of the design team, WAI was responsible for building shell and exterior improvements to the terminals. Airside design includes additions to expand holdrooms, concessions, and airline support spaces. Design services for curbside additions include additional concessions, enlarged entry vestibules, updated curbside check-in facilities, and additional areas for public seating. Improvements to the terminal shell also include replacement of exterior glazing systems designed to update the look of the terminals while improving the energy efficiency and maintenance, sound transmission and reducing solar glare. Wellner Architects also provided the services to produce and coordinate technical specifications for division 1-14 and construction administration of designed areas.

Base Bid Construction Cost	\$183,000,000
Date Complete	2004
Key Personnel	Julie Wellner, Clay Porsch, Matt Engle
Client Contact	Phil Muncy, KCAD 816-243-3000
